MEHMET LARCIN

My Professional Reflection for **TBE550**

Write a one-page reflection about how responding to the scenarios (completing the assignments) has affected your professional practice. Include a description of the types of activities you can engage in to continue your professional growth in the area of technology facilitation.

This class taught me a lot in general. First of all I learned how to create and operating system summary for any operating systems, and troubleshooting guides. Tech consulting assignment was helped me to learn how to teach something simple about technology to an adult. In revision budget I learned how to create and do a budget for the school or the district and create pie charts using Microsoft Excel. The rest assignments taught me how to collect the materials for review etc. Workshop design was a total challenge for me, in this assignment I learned how to create a workshop for adults and teach them a computer software that will help and improve their technology usage for their classes that they are teaching at. Creating instructional web pages for my workshop design was total excitement for me since I couldn't imagine to create a web site just for this purpose, to teach to people without being next or in front of them. That is considered total distance teaching. I am not a school teacher or have a career in teaching yet, but I do like and want to teach for adults in the future and this class already improved my skills in order to teach some kind of technology for adults. I think all the important assignments that I have accomplished in this class helped me to improve my skills in part of the instructional design and technology subjects.
