Health Information Technology Program (HIT)

- 900 clock hours
- 24 Semester Credit Units
- 4 Hours per day, Mon - Fri
- 160 Clock hours for externship

Health Information Technology provides the framework for managing health information across computerized systems. HIT improves the overall quality, safety and efficiency of any health system by enabling patient coordination through the manipulation of health data and information.

HIT Program Objective:

Health Information Technology program will provide all the necessary training and skills related to medical records, health informatics, organizing and managing health information data, assembling patients' medical history, symptoms, examination results, tests, and treatments while ensuring its quality, accuracy, accessibility and security in electronic format. You may work as Medical Records Technician, Health Information Technician, Insurance Biller, Medical Coder, Reimbursement Coordinator, Electronic Health Records and Documentation Specialist, Registrar, and Medical Data Analyst. Employment possibilities are in hospitals, physicians' offices, long-term care facilities, ambulatory care facilities, behavioral and mental health facilities, healthcare consulting firms, and insurance provider systems.

Courses Include:

- **Electronic Health Records & Electronic Medical Records**
- **Medical Coding**
- **Medical Terminology**
- **Computerized Networking**
- **Office Procedures**
